

STEEL PANEL RADIATORS **LEMAX** Premium

**RUSSIAN
STANDARD**

GOST 31311-2005

INSURED BY ZETTA INSURANCE LLC
FOR THE AMOUNT OF 50 MILLION RUBLES

STEEL PANEL RADIATOR MANUFACTURING PLANT

Steel panel radiators LEMAX Premium comply with the Russian standard GOST 31311-2005 and the European standard EN 442.

LEMAX Premium radiators have been produced in Taganrog since 2018 on the best automatic lines of the Italian concern LEAS, which is recognized as a leader in the production of welding equipment and has been producing various production lines with constant innovation for more than 40 years.

Production volume of the plant is **1 200 000** radiators per year. The production process base on electronic control system. The operator takes part only in select the software when changing a different radiator size or models.

The combination of high quality Russian steel and Italian equipment makes LEMAX Premium radiators reliable, efficient and durable devices.

Steel panel radiators are used in apartment buildings, in medical institutions, in the private sector, in public and commercial facilities, as well as in industrial buildings and structures. This type of heating device differs from others in high heat transfer, constant temperature regime, pleasant appearance and affordable cost.

The assortment of more than **4500** models includes all possible configurations: radiators with one, two or three panels, with a number of convectors from one to three. Each of the types is available in two versions - with side (C) or bottom (VC) connection. Also in the model range of products are hygienic radiators, which consist only of heating panels. Decorative radiators retain all the technical characteristics of the basic models, differing only in a modern and stylish appearance. Available in horizontal and vertical design.

To emphasize the individuality of the design, LEMAX Premium radiators can be made in one of the RAL colors.

LEMAX Premium radiators are connected without removing the transportation packaging, which ensures the preservation of their appearance during all installation work until they are completed.

LEMAX Premium radiators are presented in specialized software designed for calculating heating systems (BIM-models, DANFOSS, SANKOM, POTOX). Designers now have the opportunity to automatically select LEMAX Premium radiators for a specific facility.

ADVANTAGES OF RADIATORS LEMAX Premium

Strength

- test pressure 1,5 MPa
- maximum working pressure 1,0 MPa
- radiator panels are made of 1,2 mm mild steel, the convector is made of 0,4 mm steel
- radiators withstand pressure higher than the requirements of GOST 31311-2005
- increased mechanical resistance to water hammer is achieved through the use of the latest generation of welding controllers
- resistance to aggressive environment corresponds to the category C2 according to ISO 12944-2-1998

Protective and decorative coating

- applying a primer coat to all surfaces of the radiator
- preparation of surface before heat-resistant protective-decorative coating with the creation of an anti-corrosion layer with chemical components manufactured by BASF
- epoxy-polyester paint coating with a thickness of 80 microns with a paint specially developed for LEMAX by PPG Company of a bright snow-white color, which does not turn yellow during the operating period and retains up to 90% gloss
- more than 50 colors for radiators

Reliability

- fittings from Berg company (Germany)
- silent operation of the built-in valve Danfoss RA – N 013G1382
- certified production according to ISO: 9001 Bureau Veritas Sertification
- multistage quality control of products
- insured by ZETTA Insurance LLC in the amount of 50,000,000 rubles
- full 10-year warranty
- service life of 25 years

Product safety

- safety panel surfaces - no burrs, sharp edges and other defects

Quick installation

- simple install of on the wall of any degree of readiness
- simple install in shipping packaging - two layers of shrink film will safe radiators in perfect condition during repair and finishing works

STEEL PANEL RADIATOR LEMAX Premium

COMPACT (C) - SIDE CONNECTION

VALVE COMPACT (VC) - BOTTOM CONNECTION

LEMAX products steel panel radiators have two connection versions: with side connection **Compact (C)** and with bottom connection **Valve Compact (VC)**.

LEMAX Premium radiators are presented in a wide range of types and sizes.

Available in five heights 200, 300, 400, 500, 600 mm.

Available in lengths from 400 to 3000 with a step of 100 mm.

LEMAX Premium radiators are produced:

- with welded **Hook/Standart** fasteners;
- without welded **Click/Universal** fasteners.

TYPE 10 - 1 panel;

TYPE 11 - 1 panel + 1 convector;

TYPE 20 - 2 panels;

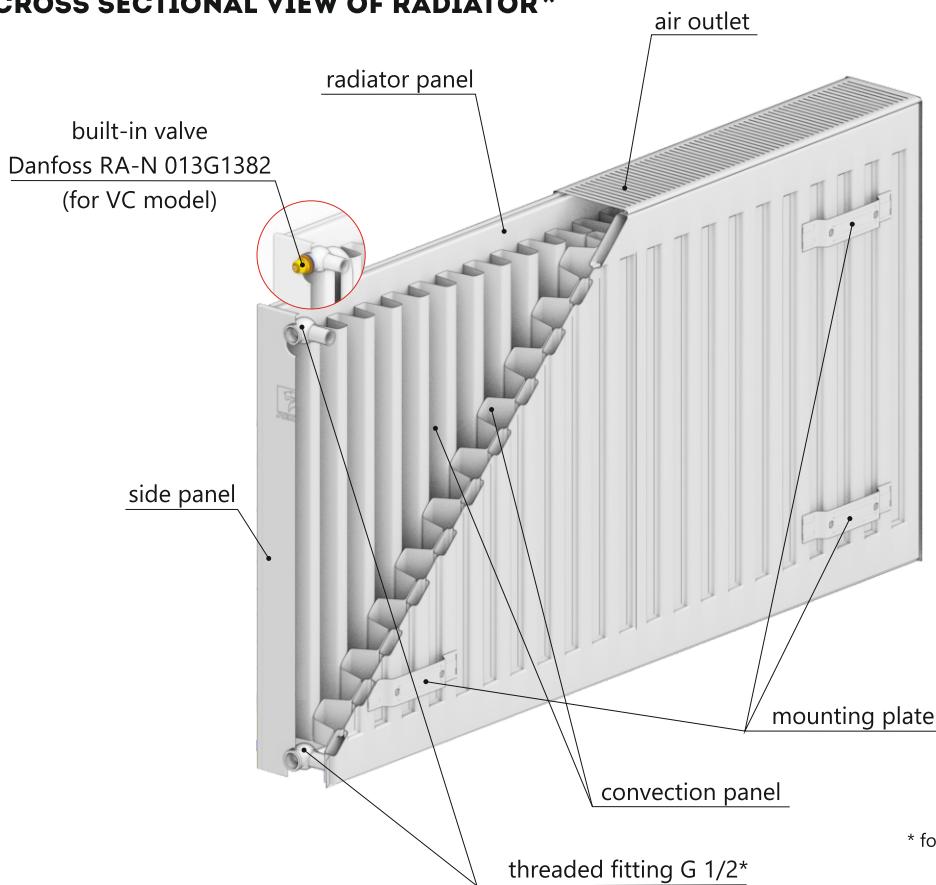

TYPE 21 - 2 panels + 1 convector;

TYPE 22 - 2 panels + 2 convectors;

TYPE 30 - 3 panels;

TYPE 33 - 3 panels + 3 convectors.

CROSS SECTIONAL VIEW OF RADIATOR*

* for radiator with side connection Compact TYPE 22

HYGIENIC RADIATORS

COMPACT HYGIENE (C H) - SIDE CONNECTION

VALVE COMPACT HYGIENE (VC H) - BOTTOM CONNECTION

Hygienic radiators LEMAX Premium Hygiene types 10, 20, 30 consist only of heating panels.

Devices of this design do not accumulate dust and are extremely easy to clean - there is easy access to each of the radiator surfaces to remove dirt and dust. The radiator is easy to clean from any of its sides, which meets the strict sanitary standards of medical and children's institutions. Hygienic radiators have a corresponding expert opinion № 1778r/20018.

Available in four heights 300, 400, 500, 600 mm.

Available in lengths from 400 to 3000 mm with a step of 100 mm.

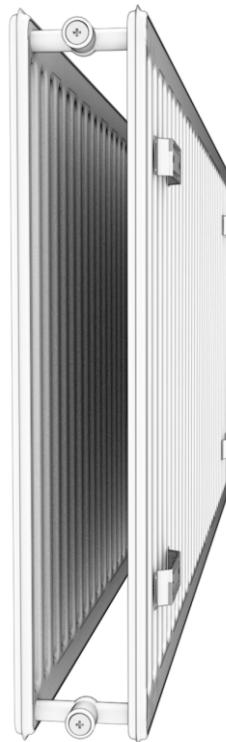

Hygienic radiators LEMAX Premium are produced with welded Hook/Standart fasteners.

TYPE 10 H - 1 panel;

TYPE 20 H - 2 panels;

TYPE 30 H - 3 panels.

MAIN FEATURES OF HYGIENIC RADIATORS:

- no convective panels and «grill» covers
- laconic appearance
- light weight
- easy cleaning
- possibility of temperature control at bottom connection

DECORATIVE RADIATORS MODERN

COMPACT MODERN (CM) - SIDE CONNECTION

VALVE COMPACT MODERN (VCM) - BOTTOM CONNECTION

COMPACT MODERN VERTICAL (CMV) - VERTICAL DESIGN

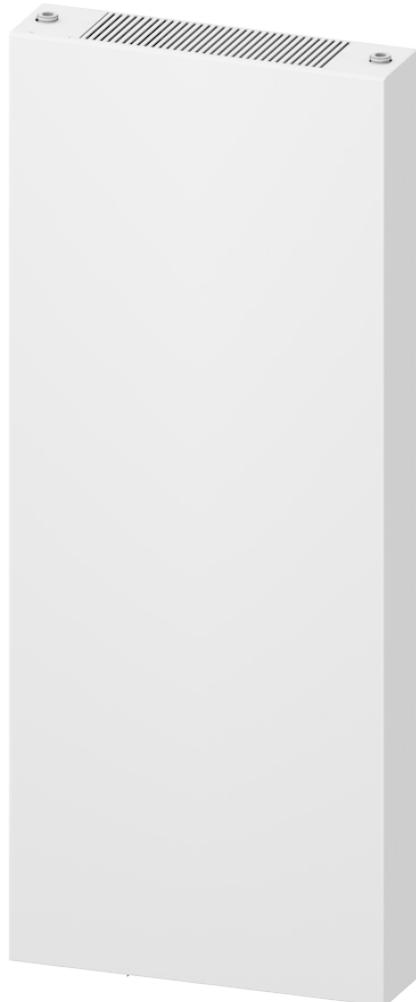

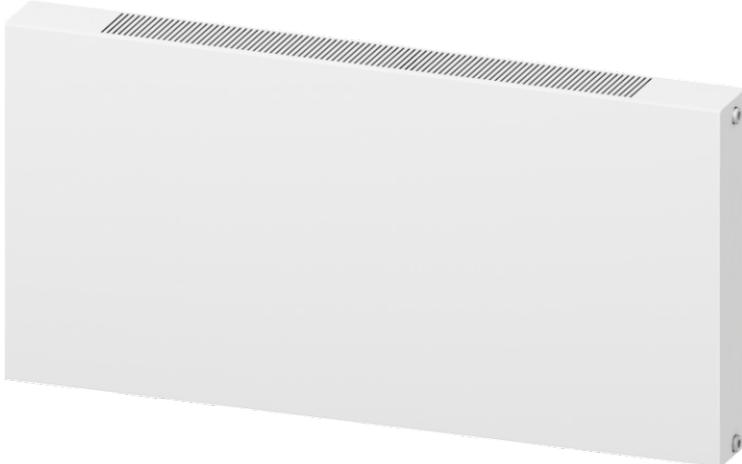

The Modern collection of decorative radiators was created to give warmth and comfort and at the same time to emphasize the style and status of the owner of the premises.

Decorative radiators retain all the technical characteristics of the basic models, differing only in a modern stylish appearance. Thanks to the decorative panels, the radiators will add personality and style to the interiors.

Decorative radiators Modern are produced in two types:

- with side connection **Compact (C)**;
- with bottom connection **Valve Compact (VC)**.

Decorative radiators can be made in
horizontal and vertical design.

Horizontal design:

TYPE 20 - 2 panels;

TYPE 21 - 2 panels + 1 convector;

TYPE 22 - 2 panels + 2 convectors;

TYPE 30 - 3 panels;

TYPE 33 - 3 panels + 3 convectors.

height: 200, 300, 400, 500, 600 mm

length: from 400 to 3000 mm in 100 mm steps

Vertical design:

TYPE 20 - 2 panels

height: from 400 to 3000 mm
in 100 mm steps

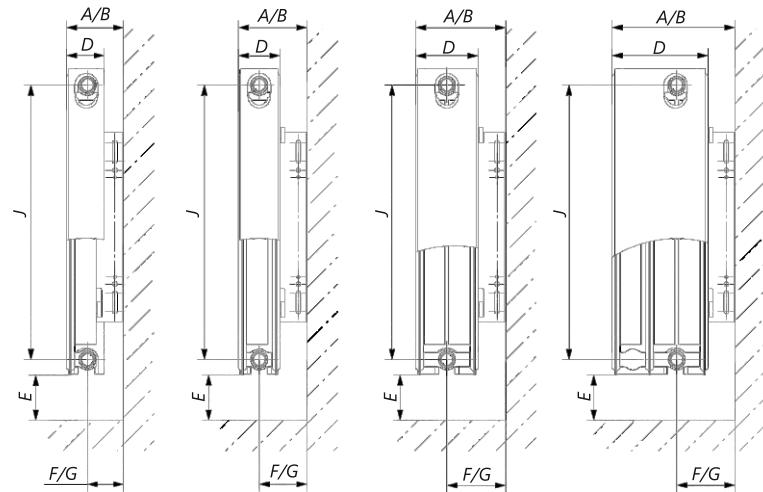

length: 200, 300, 400, 500 mm

FASTENING RADIATORS TO THE WALL

Dimensions based on using the short leg and the long leg for radiators with side connection (C) and bottom connection (VC) with Hook/Standart mount

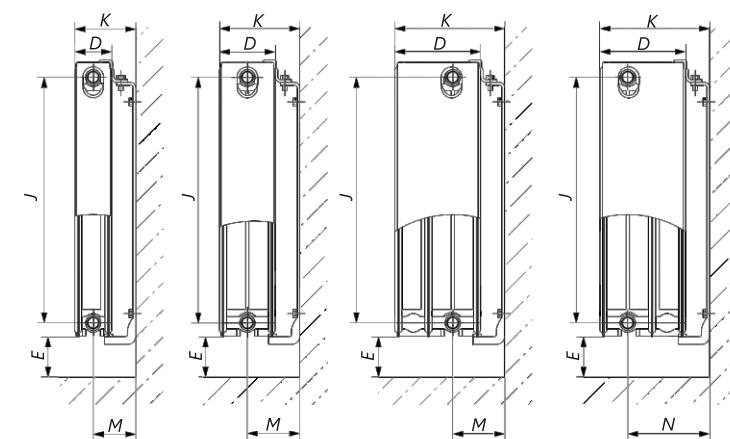

Type 11 Type 21 Type 20 and 22 Type 30 and 33

FASTENING RADIATORS TO THE WALL

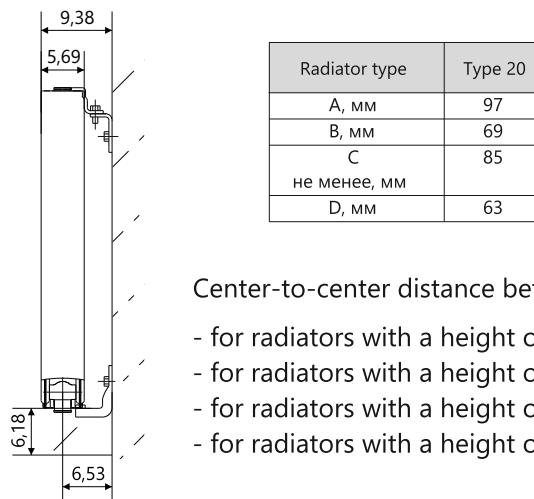

Notes:

1. Dimensions A and F - for the option of installing the fixing elements with a large shelf to the wall.
2. Dimensions B and G - for the option of installing the fixing elements with a small shelf to the wall.
3. Dimensions C and H are for Hygiene radiators.
4. Dimension J - center distance between side pipes:
 - for radiators with a height of 200 mm - 149 mm;
 - for radiators with a height of 300 mm - 249 mm;
 - for radiators with a height of 400 mm - 349 mm;
 - for radiators with a height of 500 mm - 449 mm;
 - for radiators with a height of 600 mm - 549 mm;
5. Center-to-center distance between the bottom pipes for radiators with bottom connection - 50 mm.
6. The distance from the axis of the lowermost branch pipe to the end of the side branch pipe for radiators with a bottom connection is 32 mm.

Dimensions based on using the short leg and the long leg

Compact Modern Vertical (C MV) with Click/Universal mount

Type 20

Thermostatic valve insert M30x1.5 or Danfoss	-	1	1	-

* – radiators with a height of 200 mm are produced only with the Click / Universal mount.

** – radiators in length (or height for radiators of Modern Vertical design)

up to 1600 mm are completed with two mounting brackets.

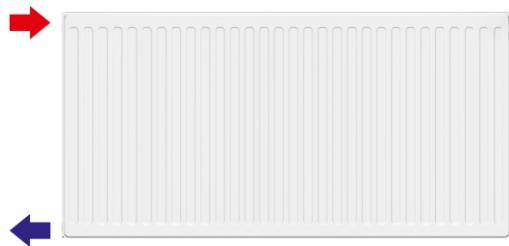

Radiators in length (or height for Modern Vertical radiators)

from 1700 mm to 3000 mm are completed with three mounting brackets.

TYPES OF CONNECTING RADIATORS WITH SIDE CONNECTIONS COMPACT

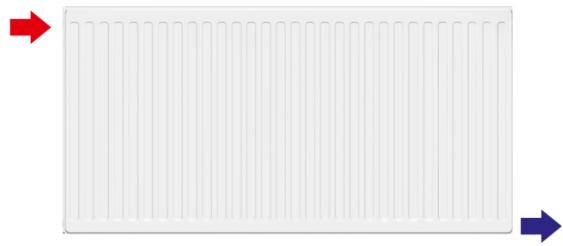

LATERAL ONE SIDE CONNECTION

It is the way of connection where an outlet and an inlet for the heat carrier set on one, either left or right, side of the radiator. The inlet pipe is connected to the upper hole, the outlet pipe is connected to the lower one on the same side. Lateral one-side connection is considered to be the most common providing smooth heating throughout the entire height of the radiator. Pipes connected vice versa (the charging pipe connected to the low hole and the outlet pipe joined to the upper hole) result in reducing heat-emission. As a rule with the lateral one-side connection a single-pipe heating system is equipped with a jumper strap (by-pass) installed between the upper & lower pipes to disconnect the proper part of the heating system if required.

CROSSFLOW DIAGONAL CONNECTION

The inlet pipe is connected to the upper corner of the radiator, the outlet pipe is connected to the opposite lower corner. The crossflow connection is ideal for radiators with the length more than 2000 mm and in case the length of the radiator is four times bigger than its height. If the lateral one-side connection is used for the above mentioned radiator, the heat carrier will not reach the far side. With the diagonal connection the heat carrier is forced to distant panel points and the radiator heats up smoothly.

SADDLE CONNECTION

Saddle connection is another version of lower connection where the inlet pipe is connected to the lower hole as well as the outlet pipe, which is connected on the opposite side. The present way of connection is recommended for the premises with the heating pipes set under the floor. This way of pipe installation contributes to the overall appearance of the premises, but one should consider that heat transfer from radiator may be reduced and the difference comes to 10%.

TYPES OF CONNECTING RADIATORS WITH BOTTOM CONNECTION VALVE COMPACT

BOTTOM CONNECTION

Type VC LEMAX radiators provide for bottom connections - option in which it is possible to disguise the heating pipes perfectly.

With the bottom connection, the inlet and outlet pipes of the heat-transfer agent are installed close to each other from the bottom edge of the radiator.

Readme! The close arrangement of the pipes should not be a cause of error. It is necessary to study the pipes labels and marks before installing the radiator - as a rule, the outlet is located closer to the lateral face of the radiator. If you confuse the location of the inlet and outlet pipes, the radiator will lose up to 30% of the power. With the right bottom connection, the panel radiators are aesthetically pleasing and effective.

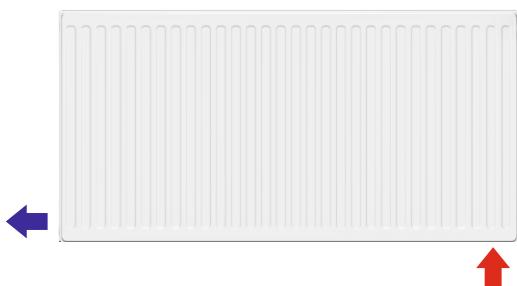

INTERMEDIATE SIDE CONNECTION

The heat-transfer agent is fed to the radiator from bottom and exits through the side hole closest to the connection point.

This type of connection is used, if it is necessary to point the outlet pipe to the side, not to the down - for example, if you need to connect a system of several radiators.

INTERMEDIATE DIAGONAL CONNECTION

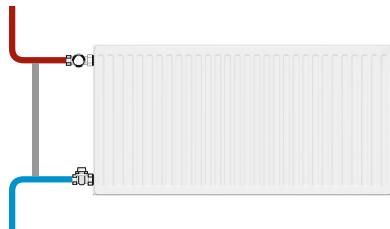

Intermediate diagonal connection of the radiator is a method in which the inlet pipe is connected from the bottom, and the heat-transfer agent outlet is in bottom side hole from the opposite side of the radiator. This method allows to output pipe to the side, if the heating circuit requires it.

Intermediate diagonal installation is recommended for radiators with length more than 2000mm; it heats evenly the radiator along the entire length.

DANFOSS THERMAL HEAD CUT

THERMOSTATIC ELEMENTS

DANFOSS

Danfoss thermostatic elements are ideal for LEMAX Premium radiators with a bottom connection (Valve Compact), equipped with a built-in valve Danfoss RA-N 013G1382.

THERMOSTATIC ELEMENT DANFOSS OEM RTR 013G7097

RTR type thermostat. consists of two parts: RTR type thermostatic element and RTR-N type (for two-pipe heating systems) or RTR-G type (for a single-pipe heating system) regulating valve with a pre-setting line capacity.

RTR 7097 is a thermostatic element with an integrated temperature sensor.

RTR type thermostatic elements are provided with devices to protect the system from freezing and limit the temperature setting

THERMOSTATIC ELEMENT DANFOSS RTR C 013G7070

RTR-C radiator thermoelements are intended for use on Danfoss radiator valves in any district or house central heating systems.

RTR-C thermostatic element is an automatic proportional controller with a small proportional band; this thermoelement is intended for use in two-pipe heating systems.

RTR-C thermoelements are equipped with a snap-on connection, which allows quickly, safely and permanently install the thermoelement on the valve body without using any tools.

THERMOSTATIC ELEMENT DANFOSS ECO 014G1003

Danfoss Eco™ is a stand-alone programmable thermostatic element for domestic use. Danfoss Eco™ powered by two AA 1.5V batteries, the thermostatic element has a compact body and is easy to control with a rotary knob and a single button.

Danfoss Eco™ is programmed with the help of an app on a smartphone using Bluetooth.

RADIATOR ACCESSORIES

FLOOR BRACKET PK3 (ITALY)

Two ready-to-install floor brackets for panel radiators with side and bottom connections types 11 C (VC), 21 C (VC), 22 C (VC), 33 C (VC), height from 200 to 600 mm, without central connections. PK3: configuration for finished floor. We recommend using two brackets when installing radiators with a length from 400 to 1600 mm, three brackets - with a length from 1700 to 3000 mm.

FLOOR BRACKET K 11.3 (RUSSIA)

Two ready-to-install floor brackets for panel radiators with side and bottom connections types 11 C (VC), 21 C (VC), 22 C (VC), 33 C (VC), height from 200 to 600 mm, without central connections. We recommend using two brackets when installing radiators with a length from 400 to 1600 mm, three brackets - with a length from 1700 to 3000 mm.

FLOOR BRACKET KH 4.70 (RUSSIA)

Bracket KH4 is designed for fastening steel panel radiators LEMAX Premium to finishing and subfloors. Radiators with side connection with welded elements of height 300, 400, 500 and 600 mm, types 10 CH, 11 C, 20 CH, 21 C, 22 C, 30 CH, 33 C. If necessary, the upper part of the rack can be cut, and the cutting place can be closed with a plastic plug. We recommend using two brackets when installing radiators with a length from 400 to 1600 mm, three brackets - with a length from 1700 to 3000 mm.

WALL BRACKET F7V EASY, H=500mm (ITALY)

Wall brackets for LEMAX Premium panel radiators 500 mm high types 21 C (VC), 22 C (VC), 33 C (VC). Multi-adjustable top, each bracket can support up to 150 kg. If the radiator mounted with F7V EASY wall brackets, then installation complies with class 3VDI 6036.

WALL BRACKET YK, H=300mm, H=500mm (TURKEY)

Bracket for type 21 C (VC), 22 C (VC), 33 C (VC). The bracket holds the lower and top edge (top cover) of the radiator. The upper holder is made of plastic with glass fibres which gives it excellent firmness. The plastic part of the holder is covered with metal cap which fastens on the top cover of the radiator. Bracket excels in quick fixing as the upper plastic holder automatically springs into position and locks the radiator.

WALL BRACKET K 17.3, (RUSSIA)

Bracket for type 21 C (VC), 22 C (VC), 33 C (VC). The bracket holds the lower and top edge (top cover) of the radiator. The upper holder is made of plastic with glass fibres which gives it excellent firmness. The plastic part of the holder is covered with metal cap which fastens on the top cover of the radiator. Bracket excels in quick fixing as the upper plastic holder automatically springs into position and locks the radiator.

COLOR PALETTE RAL

A little bit of colour can magically brighten up a room and what better way to complement an interior decor than with a colourful radiator? We understand that sometimes time is of the essence. To help you, we stock a selection of the most popular sizes and colours.

PROGRAMS FOR CALCULATING THE HEATING SYSTEM

Audytor CO 6.0 is intended for the design of heating systems, regulation of existing systems (e.g. in buildings after thermal modernization). The advantage of the program is the ability to use many heat sources in one project.

Danfoss C.O 3.8 software performs hydraulic calculations, selects heating devices and diameters of shut-off and control valves, determines balancing valves, thermostat valves on connections to heating devices, and prepares a detailed specification of equipment.
